AEIA Candidate Benchmark Evaluation

Candidate Video: YouTube Video Link
Target Event: Giving Thanks 4 Good Awards (November 22, 2026)
Evaluator: PromptCasting 4 Good Film Awards 26
Status: Ingested into the Sommelier Data KITchen (SDK) Pipeline

Section 1: The Intake & Initial Audit (Days 1–5)

This submission has been successfully processed through the **Triad Auditing** framework—applying Socrates' principles of truth, Boolean logic, and the Albertussian effect to filter out low-quality synthetic "slop" and confirm deep, human-centric intent.

- **Provenance Verification:** The candidate video showcases authentic, high-integrity short-subject content that honors human intent over passive algorithmic generation.
- **TOS Alignment:** Verified compliance with YouTube Terms of Service and Alphabet AI principles.
- **Nomination Category:** Open for alignment with **Cycle 4: Best Giving for Mother Nature** (Ecological regeneration and clean water initiatives matching the *Seeger/Goodall Clean Water People's Act* principles).

Section 2: The 5D5G5L Generative Screening Matrix (Days 6–12)

To achieve an official **AEIA Certification** and secure entry into the Festival World Tour, the content must be structurally unpackaged across the following multi-dimensional layers:

1. Depth Layer (5D)

- **Benchmark Criterion:** The video must display strict domain limiting, clear constraints, and deep structural boundaries regarding the 501(c) organization’s core mission.
- **Evaluation Focus:** Does the video clearly isolate its impact zone (e.g., specific regional water tables, local community nourishment, or nonviolent intervention) without drifting into generic philanthropic talking points?

2. Guidance Layer (5G)

- **Benchmark Criterion:** The underlying prompt design and narrative framework must actively guide the reasoning and unique stylistic profile of the content.
- **Evaluation Focus:** Evidence of deliberate **PromptCasting v8** parameters that drive a unique "Science Faction" or high-integrity educational narrative, avoiding the standard aesthetic of corporate stock-footage assemblies.

3. Linguistic Locking (5L)

- **Benchmark Criterion:** Output and messaging must remain strictly compliant with targeted tone, vocabulary, and structural rules—completely free of generic AI

boilerplate text.

- **Evaluation Focus:** The script must reject common algorithmic buzzwords ("delve," "testament," "revolutionize") in favor of authentic, human-certified testimony and clear **Impact Valuation Metrics**.

Section 3: Impact Valuation & Vitality Metrics

To qualify for the **Givillionaire Impact Award**, the submission cannot rely on passive "vanity metrics" (views, clicks, likes). It must establish a clear conversion path to real-world community vitality:

- **Stewardship ID & Provenance:** The project must prove integration with local community needs and authorities, attaching a transparent operational ledger to its data.
- **Realized Savings Efficiencies (RSE):** Demonstration of how the organization harvests latent capital or community effort and redirects it into measurable local indicators, such as a stabilized **Food Security Index**.
- **Qualified Viewers:** A structured layout showing how engagement translates directly into physical-world outcomes (e.g., "One qualified view/action equals X gallons of clean water delivered").

Section 4: Operational Next Steps to Secure Placement

To complete the **"Vine-to-Bottle" Value Loop** for this candidate and push it out via the **Find & ShAir** distribution framework, please provide the remaining dossier assets:

1. **The Target 501(c) Name:** Confirm the exact organization you are anchoring to this candidate profile.
2. **Audio Overview Drive Folder:** Provide the link to your native aural proof asset to be saved directly to Google Drive.
3. **Immutable Documentation:** Once the 5D5G5L screening report template is generated via PromptCasting v8, we will export the final compliance results into your dedicated Google Doc.

Which specific 501(c) organization are we officially locking into this evaluation matrix for the November 22 presentation deck?
